

JANET(UK) is delighted to announce the launch of the new JANET txt SMS, with PageOne the selected partner for delivery to the JANET community.

JANET txt is available to all organisations with a Primary Connection to JANET and allows them to send and receive text messages, to and from relevant groups and individuals.

KEY FEATURES AND BENEFITS

- **Cost:** Using the buying power of the whole JANET community drives down price. There are no set-up charges and the **cost per message is 4.2p + VAT.**
- **Integration:** PageOne plans to add SMS functionality into existing MIS, Library and VLE systems used within the JANET community. This will allow these resources to be used to the full in an integrated communications strategy.
- **Control:** Participants administer and regulate their own usage of texting facilities, with detailed billing and auditing reports. The service also supports customisation and branding options so that tools and messages are clearly associated with the organisation deploying them.
- **Two way communications:** Organisations can simply push out information and solicit responses when required, such as opt-in to information bulletins, simple polling or requests for further information or contact.
- **Accessibility:** The service supports multilingual formats, a choice of delivery formats (e-mail and text-to-voice options), and international delivery.
- **Flexibility:** Messages can be prepared from templates using mail merge functions and scheduled for delivery at appropriate times. Potential recipients can also be grouped into relevant groups for bulk delivery of messages (e.g. 'all staff', 'second year law students', etc.).
- **Security:** The service has been designed from the start as a secure and highly available resource, following best practice in handling data potentially relating to minors or vulnerable adults. In addition, relevant operating staff have undergone Criminal Records Bureau checks.
