

Joining JANET Roaming

Organisations wishing to join JANET Roaming to enable the implementation of an eduroam service should complete the application form below and copy and paste it into an [e-mail to JANET Service Desk](#).

It is recommended that organisations familiarise themselves with the technical requirements overview presented in [eduroam and how JRS Works](#) and must read and accept the conditions of use described in the [JANET eduroam Policy \(pdf\)](#). By participating in the federated eduroam service in the UK, organisations will be deemed to have accepted the rules of membership, which may evolve over time. Applications can only be accepted from a director or network management contact, as registered with JANET Service Desk.

Application to Join JANET Roaming and participate in the provision of eduroam	
Organisation's full name [1]:	
Trading name / operating unit name [2]:	
Address:	
Your name:	
Your position:	
e-mail address:	
Telephone number:	
Technical contact if different from above [3]:	
Technical contact e-mail address:	
Telephone number of technical contact:	
Technical contact to join janet-roaming mail list (strongly recommended):	Yes / No
Service alerts/notifications e-mail address [4]:	
User database (eg. LDAP, AD, NDS, other):	
Is a RADIUS server already deployed at organisation?	
If RADIUS deployed, what software and version? Intended RADIUS platform if not already deployed:	
Intended initial service type (Home-only, Visited-only, full Home and Visited service):	
Realm name requested (eg. myorg.ac.uk / not required because Visited only service planned) [5]:	
Intended wireless security if applicable (e.g. WPA/TKIP, WPA2/AES) [6]:	
Target implementation date (e.g. within 6 months):	
Primary reason for wishing to implement eduroam:	
Acceptance of JRS Rules of Membership:	

[1] This is the name of the legal entity that is registering to participate in eduroam in the UK.

[2] This is the name the organisation/operational unit deploying eduroam is commonly known by and will be used for its listing on the JANET web pages and in the JRS Support server.

[3] A web login account on the JRS Support server will be created for the technical contact to enable update of the organisation's JRS configuration and service details. (Secondary contacts can be created if you wish via the JRS Support site).

[4] Service alerts and important notifications warranting your soonest attention only will be sent to this contact. Some organisations have chosen to use their service desk ticketing e-mail for this.

- [5] As per the [Technical Specification](#), the realm must be (or be derived from) a DNS name from the organisation's registered DNS namespace. It is expected that most organisations will request their domain name (eg."myorg.ac.uk") although it is perfectly acceptable to request a sub-domain name (eg."staff.myorg.ac.uk"). If you intend to act as a Visited site only and do not intend to register a realm name please state, "not required Visited site only".
- [6] Implementation of WPA/TKIP-only eduroam WLAN is deprecated. Joiners should support WPA2/AES on their eduroam networks, but may also support WPA/TKIP. For further advice on which WLAN security or eduroam service type to implement, you can state – "request advice".
